DWA_08 Discussion Questions

In this module, you will continue with your "Book Connect" codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

_____

1. What parts of encapsulating your logic were easy?
   - Testing and Debugging

_____

2. What parts of encapsulating your logic were hard?
   - Finding functions that I could reuse in a different part of the code
   - Managing Dependencies

_____

3. Is abstracting the book preview a good or bad idea? Why?

   - It is a good idea, in the data.js file-there was so much information arranged in different ways, abstraction can be in handy as I got to show the specific kind of information that was required without erasing any of the data from the original file. The presentation of the data on script.js was the way it needed to be.

_____
